1. What is one of the key reasons Google Cloud Platform can scale effectively to query large datasets?

1 / 1 point

- ☐ Users can manually launch and customize as many cloud virtual machines as they need to process larger BigQuery datasets
- ☐ Google Cloud Storage buckets map to one specific and large hard drive in the cloud
- ☒ Storage and compute power are handled separately and users don't manage their own data warehouse architecture

✓ **Correct**

Storage and Compute power are separate resources on Google Cloud Platform. They are fungible resources that can scale up and down to meet querying demands.

2. Select the common reasons why organizations move to the cloud for big data analysis (choose all that apply):

1 / 1 point

- ☒ Reduced cost compared to on-premise

✓ **Correct**

- ☒ Querying infrastructure is fully-managed
